Query: Analyse supplier performance across all product types. Identify which product categories have the highest defect rates, which shipping carriers offer the best revenue-to-cost ratio, flag any SKUs with failed inspection results, and highlight stockout risk where lead times are long relative to stock levels. report findings must be backed by solid proof from within the data

****EXECUTIVE SUMMARY**** Hair care products exhibit the highest average defect rate (2.48 %) while Carrier C delivers the strongest revenue to shipping cost efficiency (US\$1,138.56 per shipping dollar). Thirty six SKUs failed inspection, with the most severe defects concentrated in skincare (e.g., SKU42 at 4.94 %). Stock out exposure is acute for a handful of items, notably SKU34 (score 13) where a single unit on hand must cover a 26 day lead time.

****KEY FINDINGS**** - ****Defect concentration by category:**** Hair care = 2.483 % (highest), Skincare = 2.335 %, Cosmetics = 1.919 %. - ****Carrier efficiency:**** Carrier C generates \$1138.56 revenue per shipping dollar (best), followed by Carrier B (\$1,055.70) and Carrier A (\$917). - ****Failed inspection SKUs:**** 36 SKUs flagged; the top five defect rates are SKU42 (4.94 %), SKU65 (4.91 %), SKU50 (4.75 %), SKU3 (4.75 %), and SKU73 (4.62 %). These span skincare, cosmetics and hair care. - ****Stock out risk scores:**** SKU34 (score 13), SKU68 (score 8), SKU24 (score 5.2), SKU2 (score 5), and SKU33 (score 3.4) represent the highest exposure, driven by minimal on hand inventory versus long lead times (up to 26 days). - ****Margin resilience:**** Gross margin ratios remain above 99 % for all product types (Cosmetics 0.993, Hair care 0.991, Skincare 0.992), indicating pricing strength despite quality and logistics challenges.

****RISKS AND RECOMMENDATIONS**** The elevated defect rates in hair care and the concentration of high defect SKUs in skincare threaten brand reputation and increase warranty costs; immediate root cause analysis and tighter supplier quality controls are required. Simultaneously, the top risk stock out SKUs (e.g., SKU34) should be prioritized for safety stock adjustments and lead time reduction initiatives, while expanding the use of Carrier C for high value lanes to capitalize on its superior revenue to cost performance.
