Query: Analyse supplier performance across all product types. Identify which product categories have the highest defect rates, which shipping carriers offer the best revenue-to-cost ratio, flag any SKUs with failed inspection results, and highlight stockout risk where lead times are long relative to stock levels. report findings must be backed by solid proof from within the data

****EXECUTIVE SUMMARY**** Haircare products exhibit the highest defect rate (2.48 %) while Carrier C delivers the best revenue to shipping cost ratio (\$1,138.56 per shipping dollar). A total of 36 SKUs failed inspection, and stockout exposure is greatest for SKU34 (skincare) with a risk score of 13, indicating immediate inventory and supplier lead time concerns.

****KEY FINDINGS**** - Haircare has the highest average defect rate (2.483 %) versus skincare (2.335 %) and cosmetics (1.919 %). - Carrier C provides the strongest revenue efficiency (\$1,138.56 / \$ shipping) outperforming Carrier B (\$1,055.70) and Carrier A (\$917.00). - Carrier B records the lowest carrier level defect rate (1.76 %) even though its revenue efficiency is second best. - 36 SKUs failed inspection; the five worst are SKU42 (4.94 %), SKU65 (4.91 %), SKU50 (4.75 %), SKU3 (4.75 %), and SKU73 (4.62 %). - Stockout risk is highest for SKU34 (skincare) with a risk score of 13 (stock = 1, lead time = 26 days); SKU68 (haircare) follows with a score of 8 (stock = 0, lead time = 8 days). - Among transport routes, Route C has the lowest average defect rate (2.055 %) while Route B incurs the highest average transport cost (\$595.66 per SKU).

****RISKS AND RECOMMENDATIONS**** The elevated defect rate in haircare and the poor performance of Carrier A (highest defect rate, lowest revenue efficiency) pose quality and cost risks; initiate a supplier quality audit for haircare and renegotiate carrier contracts or shift volume to Carrier C/B. Immediate inventory actions are required for high risk SKUs (e.g., SKU34, SKU68) – increase safety stock or accelerate lead time reductions – and conduct root cause analysis on the 36 failed inspection SKUs to prevent recurrence.
